Purified fibulin, DNA encoding it and antibodies reactive with it useful as diagnostic and therapeutic component.

Useful as diagnostic and therapeutic component.

Claim 10, Fig 5: 56pp; English.

The fibulin A, B and C forms are identical from their N-terminals to a divergence point at posn. 566 (terminal codon in fibulin A) and stained; encoding polypeptides of 566, 601 and analysis with on and spacing of the Cys residues revealed two cys repeat moftif (I and II). The type I motif, CC(X)12C-(X)9-10C(X)6CC is repeated twice, separated by an imperfect form of the repeat lacking two Cys residues. The same motif is found in complement components C3a, C4a and C5s; the inverse is found in albumin, vitamin D-binding protein and alpha-fetoprotein. The disulphide-stabilized loop structure is thought to be conserved.

The type II motif, related to repeats found in epidermal growth factor precursor is a 6-Cys pattern repeated nine times, although the ninth repeat in the A form is incomplete. Four of the repeats (2, 3, 4 and 9) differ from the EGF-like motif in having a 4-6 consensus sequence for Asp and Asn hydroxylation. The 7th repeat consensus sequence for Asp and Asn hydroxylation. The 7th repeat consensus sequence XD(I/V)(D/N)E. Fibulin binds to the cytoplasmic domain of the betal subunit of integrin adhesion receptors in a cation-dependent, EDTA-reversible manner. It can be used to manipulate adhesion of cells to fibronectin, collagen, with the contents and cation-dependent, EDTA-reversible manner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    laminin, and possibly also other proteins. Antibodies reactive with the protein have important diagnostic and therapeutic uses. See also R11147, R11148 and R11149.

Tryptophan aporepressor used in vaccine prodn., etc. - contains

Within its' amino acid sequence, a peptide segment heterologous

to the aporepressor located on aq. solvent-assessible surface

Claim 4 + 20; Page 68 + 72; 82pp; English.

The hybrid protein contg. receptor binding sites is active as ligand

for mammalian cell receptors and can be used for a variety of

applications including treatment of diseases resulting from receptor/

ligand dysfunction, and in vaccine prodn.
                                                             The monoding 4-1BB ligand polypeptide(s) - useful for stimulating T-cell proliferation in vitro, and as research tools
This protein comprises human 4-1BB ligand (4-1BB-L), a novel
C-cytokine capable of binding cell surface receptor 4-1BB (see
C-comprise). Its amino acid sequence was deduced from an isolated
C-comprise and sequence was deduced from an isolated
C-comprise and acid sequence was deduced from an isolated
C-comprise and also been identified (see W26656). Human
4-1BB-L polypeptides, especially claimed soluble polypeptides
C-comprising the 4-1BB-L extracellular domain (amino acids 49-254),
C-can be expressed in transformed host cells. They can be used to
S-timulate T-cell proliferation in vitro, as research tools and as immunostimulants for purifying 4-1BB. They may also be useful as immunostimulants for therapeutic purposes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                36 lpllnlmltpderealgtrvriveecsrrgdmscsgrelknelgagiatitrgsnslkaa 95

Claim 3; Page 12-14; 20pp; Japanese.
This protein is a porcine complement inhibitor encoded by pMCPCDNA (TRIO98). The DNA is useful for large scale production of the forcembinant porcine complement inhibitor, which is useful for porcine organ transplantation into humans. The DNA clone pMCPcDNA is also useful in the analysis of the promoter region of porcine complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ï
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

N-Romerceding porcine complement inhibitor - useful in porcine organ
                                                                                                                                                                                                                                                                                                                                                                                                                                      antiinflammatory agents
Claim 1; Page 1; 10pp; Japanese.
The protein sequence of hPES was deduced from the CDNA sequence
obtd. by screening a human genomic library in EMBL3. hPES can be
used to screen anti-inflammatory agents. An anti-body against a
peptide specific to hPES can be made, and used for the determin-
ation of the protein.

DNA sequences of HSV-1 strains F (Q50037-38, Q50040-42), 17577+ (Q50043-45, Q58777), MGH-10 (Q58778-83), and CVG-2 (Q58784-88) and the predicted open reading frames for ICP34.5 (R50048-58) are compared in Fig 1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pisclosure, Page 74-75, 95pp, English.

Programmed cell death may be treated through the use of the HSV-1 gene gammal 34.5 or prod. of its expression, ICP34.5. The gene and its expression have been demonstrated to be required for HSV-1 neurovirulence, and in partic., to act as an inhibitor of neuronal programmed cell death which allows for viral replication. Use of the gene therapy, or the protein itself, can be expected to result in inhibition of programmed cell death in various neurodegenerative

Use of gamma, 34.5 gene or encoded ICP 34.5 - for preventing or
treating programmed cell death in neuronal cells or in screening
                                                                                                                                                                                                                                                      New glutamic acid receptor and gene - for use in analysis of synaptic signal translation, and diagnosis of brain disease claim 1; Page 25-31; 35pp; Japanese.
The sequence shows a glutamic acid receptor. The receptor is useful for the analysis of nerve signal translation; within the synapse, expresssion of synapse plasticity, nerve cell necrosis, brain structure and brain disease. It can also be used in gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gene therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Application US/07941372
Patent No. 5460810
GENERAL INFORMATION:
APPLICANT: Williams, David A.
APPLICANT: Clark, Steven C.
TITLE OF INVENTION: Method of Treating Cell Damage or ITTLE OF INVENTION: Depletion
NUMBER OF SEQUENCES: 4
                                                                                                                   Sequence 2, Application PC/TUS9308247

Mean 21.806; Variance 86.670; scale 0.252 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

In Paphotoxin, useful as antiinflammatory agent, tumour growth inhibitor. T-cell inhibitor or activator.

T inhibitor. T-cell inhibitor or activator.

C laim 1; Page 60; 75pp; English.

A protein, designated p33, is found on the surface of several types of lymphocyte ecils, including OKT3-stimulated primary T-cells, antigen-specific IL-2 dependent CT1 clones, and a PMA-stimulated human T-cell hybridoma, II-23.D7. It forms a novel complex with complex vict in RNPOACOM (IT). The N-terminal of the p33 protein contains the sequence represented in RN2024 or RN20335. The sequence at the 6th cycle appeared to be a mixt. of both G and I indicating possible between the p33 protein may have one of these sequences or Score 66; DB 4; Length 10; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the protlen product of the Saccharomyces cerevisiae AL33-18C (FERM BP-5529) aureobasidin resistance gene scaurz, the claimed promoter of which can be used for the effective expression of genes encoding proteins, antisense DNA or RNA, decoy genes or ribozymes in yeast, e.g. for the industrial scale production of proteins for drug or food use. The promoter's transcription can be regulated by proteins encoded by the plaiotropic drug resistance gene, PDR, and it can be used for culture in a complete nutritive medium.
                                                                   Disclosure; Page 77-84; 110pp; English.
Saccharomyces cerevisiae DKD5D, which is sensitive to aureobasidin, was mutagenized with EMS and genomic libraries of 2 resistant strains were prepared. Resistant gene scauriR (Q75956) from the Other. A DNA fragment of scauri was used as a probe to isolate a sensitive gene, scauris (Q75956), from the other. T852A mutation leading to a F158Y conversion gave rise to the resistance of scaurir.
                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DNA encoding insect steroid receptors - and ligands, for use as benign inducing factors
Claim 24; Page 103; 126pp; English.

The amino acid sequence codes for the (20-0H) ecdysone receptor protein which is part of the insect steroid receptor superfamily. It can be used to screen for ligands specific for the insect steroid receptors which can be used as highly specific and highly active pesticides which are biodegradable. See also Ri3791-Ri3794.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ecdysteroid, receptor; DHR23alpha; Drosophila; steroid; receptor;

Pulmonary surfactant proteins - used for treating Hyaline Membrane Disease or Respiratory Distress Syndrome.
Claim 1; Page 33-34; 50pp; English.
Gene product may be used in treatment of Hyaline Membrane Disease and Respiratory Distress Syndrome (RDS) in both premature infants and adults eg. cardio-pulmonary operations. The protein products may also be used to raise diagnostic antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pulmonary surfactant proteins - used for treating Hyaline Membrane Disease or Respiratory Distress Syndrome. Claim 1; Page 34A-B; 50pp; English.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DNA encoding porcine complement inhibitor - useful in porcine organ transplant to humans claims are 12-14; 20pp; Japanese.

This protein is a porcine complement inhibitor encoded by pMCPcDNA (761098). The DNA is useful for large scale production of recombinant porcine complement inhibitor, which is useful for porcine organ transplantation into humans. The DNA clone pMCPcDNA is also useful in the analysis of the promoter region of porcine complement inhibitor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                       ï

New agouti signal protein peptide(s) and nucleic acids - used for altering melanin prodn., for treating e.g. melasma photo-ageing spots, solar keratosis or vitiligo

Talian 10; Page 11; 67pp; English.

The sequences given in W10101-29 are biologically active peptides

The sequences given in W10101-29 are useful for cosmetic purposes and fragments of the agouti signalling protein (ASP) which have depigmenting activity. These peptides are useful for cosmetic purposes and for clinical application in the prevention or treatment of various hyperpigmentary conditions and diseases such as melasma photoageing spots, solar keratosis, and post-inflammatory hyperpigmentation such as occurs at sites of wound healing. They can also be used to provide enhanced eumelanogenesis for treating eg. vitiligo, leucoderma, some forms of albinism and hair greying.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        18-529-1997 (first entry)
Human agout1 signalling protein fragment #2.
Agout1 signalling protein, ASP; depigmenting activity; cosmetic;
hyperpigmentary condition; melasma photoageing spots; solar keratosis;
post-inflammatory hyperpigmentation; wound healing; eumelanogenesis;
vitiligo; leucoderma; albinism; hair greying.
                                                                                                                              DNA corresp. to (part of) foot and mouth disease virus RNA - useful in prepn. of vaccines for producing antibodies against the virus Example; Fig 6; 57pp; English.

The inventors claim a DNA molecule comprising a nucleotide sequence corresp. to all or a portion of foot-and-mouth disease virus RNA (FMDV). The DNA molecule is esp. for a precursor of FMDV capsid protein. It esp. codes for FMDV protein p88 and VPI-VP4. It may code for very vy2 or vy4, vP2, vP3 and VPI contiguously. The inventors also claim a vaccine for stiumlating prodn. of antibodies against FMDV in a mammal which comprises at least one of the above recombinant proteins produced by a host cell transformed with the DNA.

Human mature uridine diphosphate galactose-4-epimerase (UDP-G4E)

(W01619) catalyses a reversible reaction between UDP-glucose and UDP-galactose that allows galactose residues to enter into the main pathways of glucose metabolism. A deficiency of the enzyme results from a CDNA clone (T58301) derived from a human endometrial tumour library. Recombinant UDP-G4E polypeptides can be produced in transformed host (e.g. E. coli, COS, Sf9 insect) cells or expressed in vivo for use in the treatment of UDP-G4E deficiency, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Bacillus thuringlensis toxin gene - useful in recombinant hosts, particularly plants for the control of nematodes Claim 4; Page 35-39; 44pp; English.

This sequence represents the protein encoded by a polynucleotide of the invention. The polynucleotide of the invention is a sequence from a Bacillus thuringlensis (Bt) isolate selected from PS80JJ1, PS158D5, PS169E, PS177F1, PS1776, PS204G4 and PS204G6, that encodes a toxin active against nematodes. This sequence represents the 167P protein, and is a delta-endotoxin protein. The polynucleotides and toxins can be used for the control of nematode pests such as Panagrellus
                                                                                                                                                                                                                                                                                                                                                                                                                                                           New agouti signal protein peptide(s) and nucleic acids - used for altering melanin prodn., for treating e.g. melasma photo-ageing spots, solar keratosis or vitilido
claim 5; Page 8-9; 67pp; English
The sequences given in W10101-29 are biologically active peptides and fragments of the agouti signalling protein (ASP) which have depigmenting activity. These peptides are useful for cosmetic purposes and for clinical application in the prevention or treatment of various hyperpigmentary conditions and diseases such as melasma photoageing spots, solar keratosis, and post-inflammatory hyperpigmentation such as occurs at sites of wound healing. They can also be used to provide enhanced emmelanogenesis for treating eg. vitiligo, leucoderma, some forms of albinism and hair greying.
         Agouti signalling protein; ASP; depigmenting activity; cosmetic; hyperpigmentary condition; melasma photoageing spots; solar keratosis; post-inflammatory hyperpigmentation; wound healing; eumelanogenesis; vitiligo; leucoderma; albinism; hair greying.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    07-APR-1998 (first entry)
Nematode toxin 167P protein.

New agouti signal protein peptide(s) and nucleic acids - used for latering methanin prodn., for treating e.g. melasma photo-ageing spots, solar keratosis or vitiligo claim 6; Page 8-9; 67pp; English.

The sequences given in W10101-29 are biologically active peptides and fragments of the agouti signalling protein (ASP) which have depigmenting activity. These peptides are useful for cosmetic purposes and for clinical application in the prevention or treatment of various hyperpygmentary conditions and diseases such as melasma photoageing spots, solar keratosis, and post-inflammatory hyperpigmentation such as occurs at sites of wound healing. They can also be used to provide the performance of the provide station of the prevention of the provide stations and post-inflammatory hyperpigmentation such as course at sites of wound healing. They can also be used to provide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    solar keratosis;
Example; Page 17; 28pp; English.

The sequence is that of a polypeptide present in fraction K of the venom of Agelenopsis aperta, it blocks calcium channels in cells of both mammals and invertebrates, partic. those affecting neuronal and muscle cells. It may be used in the treatment of angina, hypertension, cardiomyopathies, supraventricular arrhythmia, cesophogeal achalasia, premature labour, and Raynaud's disease. It may also be of use in the study of cell physiology and in the control of invertebrate pests. It may be produced synthetically.
                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          17-SEP-1997 (first entry)

Human agouti signalling protein.

Agouti signalling protein. ASP; depigmenting activity; cosmetic;

Agouti signalling protein; melasma photoageing spots; solar Keratosi
phyperpigmentary condition; melasma photoageing spots; solar Keratosi

Mean 39.989; Variance 88.114; scale 0.454 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 41.891; Variance 75.823; scale 0.552

PHILLOS. TRANS. R. SOC. LOND., B, BIOL. SCI. 306:345-354(1984).
-!- FUNCTION: C1Q ASSOCIATES WITH THE PROENZYMES C1R AND C1S TO YIELD C1, THE FIRST COMPONENT OF THE SERM COMPLEMENT SYSTEM. THE COLLAGEN-LIKE REGIONS OF C1Q INTERACT WITH THE CA(2+)-DEPENDENT C1R(2)C1S(2) PROENZYME COMPLEX, AND EFFICIENT ACTIVATION OF C1 TAKES PLACE ON INTERACTION OF THE GLOBULAR HEADS OF C1Q WITH THE FC REGIONS OF IGG NATIDEDY PRESENT IN IMMUNE COMPLEXES.
-!- SUBUNIT: C1 IS A CALCIUM DEPENDENT TRIMOLECULAR COMPLEXES.
R AND S IN THE MOLAR RATION OF 1:2:2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  -1- SUBUNIT: CLO SUBCOMPONENT IS COMPOSED OF NINE SUBUNITS, SIX OF WHICH ARE DISULFIDE-LINKED DIMERS OF THE A & B CHAINS, AND THREE OF WHICH ARE DISULFIDE-LINKED DIMERS OF THE C CHAIN.
-1- SIMILARITY: CONTAINS A CLQ DOMAIN.

DEPLIER C., D'ARCY A., WINKLER F.K., EGGIMANN B., HOSANG M.;
EMBO J. 11:3921-3926(1992).

-! FUNCTION: PLATELET-DERIVED GROWTH FACTOR IS A POTENT MITOGEN FOR CELLS OF MESENCHYMAL ORIGIN. BINDING OF THIS GROWTH FACTOR TO ITS AFFINITY RECEPPOR ELICITS A VARIETY OF CELLULAR RESPONSES. IT IS RELEASED BY PLATELETS UPON WOUNDING AND PLAYS AN IMPORTANT ROLE IN STIMULATING ADJACENT CELLS TO GROW AND THEREBY HEAL THE WOUND.
-! SUBGNIT: ANTIPARALLEL DISULFIDE-LINKED DIMER OF NONIDENTICAL (A AND B) CHAINS. HOMODIMER OF A AND B CHAINS ARE IMPLICATED IN TRANSFORMATION PROCESSES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A-A AND B-B, AS WELL AS A-B, DIMERS CAN BIND TO THE PDGF RECEPTOR

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MANENT Prolines and lysines at the third position of the tripeptide
repeating unit (G-X-Y) are hydroxylated to varying extents.
Prolines are predominately 4-hydroxylated in the Y-position and
both 3- and 4-hydroxylated in the X-position. Lysines are
5-hydroxylated and subsequently about 50% are O-glycosylated.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The Cig subcomponent is composed of nine subunits, six of which are disulfide-linked dimers of the A (see ClHUQA) and B chains, and three of which are disulfide-linked dimers of the C (see ClHUQC) chain. Equimolar amounts of the A, B, and C chains are found after reduction of the disulfide bonds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ##molecule_type protein

116-Gix may also be present
The first component of complement is a calcium-dependent complex of
the three subcomponents Clq, Clr, and Cls. Subcomponent Clq binds
to immunoglobulin complexes, with resulting serial activation of
Clr (enzyme), Cls (proenzyme), and the other eight components of
complement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  #domain signal sequence #status predicted #label SIG\

The active enzyme catalyzes the transfer of acyl groups from lecithin to sterol to form sterol esters. Palmitoyl, oleoyl, and linoleoyl residues can be transferred; a number of sterols, including cholesterol, can act as acceptor. Apolipoprotein A-I is a potent activator for this enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Meroni, G.; Malgaretti, N.; Magnaghi, P.; Taramelli, R.

Mean 29.913; Variance 129.900; scale 0.230 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 30.060; Variance 54.689; scale 0.550

-!- IN CONTRAST TO TEAST OFFICE CYCLASE S. POMBE CYCLASE IS NOT LIKELY TO B REGULATED BY RAS PROTEINS.
-!- SIMILARIY: THE REPEATED LEUCINE-RICH (LRR) SEGMENT IS FOUND IN MANY PROTEINS. NUMBER IN THIS PROTEIN: 22.
-!- SIMILARIY: BELONGS TO CLASS-3 OF ADENYIKL CYCLASES.
-!- SIMILARIY: CONTAINS A PP2C-LIKE DOMAIN.

KATTAL S.L., SINGH G., LOCKER J.L.;
AM. J. RESPIR. CELL MOL. BIOL. 6:446-452(1992).

-!- FUNCTION: IN PRESENCE OF CALCTUM IONS, PSAP BINDS TO SURFACTANT PHOSPHOLIPIDS AND CONTRIBUTES TO LOWER THE SURFACE TENSION AT THE ATR-LIQUID INTERFACE IN THE ALVEOLI OF THE MANMALIAN LUNG AND IS ESSENTIAL FOR NORMAL RESPIRATION.
-!- SUBBUNIT: OLICOMERIC COMPLEX OF 6 SET OF HOMOTRIMERS.
-!- FULMONARY SURFACTANT COMFISEN OF 90% LIPID AND 10% PROTEIN. THERE ARE 4 SURFACTANT ASSOCIATED PROTEIN: 2 COLLAGENOUS, CARBOHYDRATE-BINDING GLYCOPROTEINS (SP-A AND SP-D) AND 2 SMALL HYDROPHOBIC

the repeat lacking two cys residues. The same motif is found in albumin, vitamin D-binding protein and alpha-fetoprotein. The albumin, vitamin D-binding protein and alpha-fetoprotein. The disulphide-stabilized loop structure is thought to be conserved. The type II motif, related to repeats found in epidermal growth factor precursor is a 6-Cys pattern repeated nine times, although the ninth repeat in the A form is incomplete. Four of the repeats, (2, 3, 4 and 9) differ from the EGF-like motif in having a 4-6 residue insertion between cystelnes 4 and 5 instead of the usual single residue. Embodied within repeats 5, 6, 7 and 8 is the consensus sequence for Asp and Asn hydroxylation. The 7th repeat contains the consensus of glycosylation sequence, (XXXXC.)

Immediately following each repeat is a pentapeptide with the consensus sequence XD(IV)(D/N)E. Fibulin binds to the cytoplasmic domain of the betal submit of integrin adhesion receptors in a cation-dependent, EDTA-reversible manner. It can be used to manipulate adhesion of cells to fibronectin, collagen, laminin, and possibly also other proteins. Antibodies reactive with the protein have important diagnostic and therapeutic uses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ij

Purified fibulin, DNA encoding it and antibodies reactive with it useful as diagnostic and therapeutic component.

- useful as diagnostic and therapeutic component.

Claim 10; Fig 5; 56pp; English.

The fibulin A, B and C forms are identical from their N-terminals to a divergence point at poss. 566 (terminal codon in fibulin A) after which they are distinct, encoding polypeptides of 566, 601 and 683 residues resp. All three forms are rich in cystelne (11 %) and analysis with no. and spacing of the Cys residues revealed two cypes of repeat moftif (I and II). The type I motif, CC(X)12C-(X)9-10C(X)6CC is repeated twice, separated by an imperfect form of the repeat lacking two Cys residues. The same motif is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement components C3a, C4a and C5a; the inverse is found in complement C5a; the think repeat in the A form is incomplete. Four of the repeats C5a; the ninth repeat in the A form is incomplete. Four of the repeat C5a; the ninth repeat in the A form is incomplete. Four of the cyco.

C5a, 3, 4 and 9) differ from the EGF-like motif in having a 4-6 consensus sequence C5a; propeats S, G, 7 and 8 is the consensus sequence C1App and Asn hydroxylation. The 7th repeat C5a contains the consensus O-1ycosylation sequence. CXCXC.

C6a Immediately following each repeats is a pentapeptide with the consensus Sequence C1AP) also other proteins and therapeutic uses.

C7 Immediately following each repeat is a pentapeptide with the protein have important diagnostic and therapeutic uses.

C8 also R11147, R11148 and R11149.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                p70134;

New March 2012.

New multicistronic expression units - for producing equimolar march of polypeptide(s) in mammalian cells as hosts cards. of polypeptide(s) in mammalian cells as hosts

Claim 11; Page 29; 109pp; German.

A PDGF-AB heterodimer is recombinantly produced using a bicistronic expression unit in which a sequence responsible for internal translation start is located between cistrons coding for the PDGF-B and PDGF-A chains. The preferred PDGF-B sequence for inclusion in the bliststronic construct is 058725 which codes for the precursor sequence 241 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New vectors expressing platelet-derived growth factor B epitope(s) - and contg. c-sis or v-sis genes portions; are used to promote wound healing and produce antibodies

10 bisclosure: Fig 2, 49pp; English.

10 863469 describes the amino acid sequence of recombinant platelet derived growth factor B c-sis (rPDGF B c-sis). It may be used to promote wound healing, or as an antigen to prepare antisera or sequence 21 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 28-JUN-1995 (first entry)

The exon sequences are the same as those published for a c-cis gene isolated from a human fetal liver chromosomal library. (Josephs et al, Science 223: 487 (1984))
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                      with vector contg. new multi-cistronic expression unit, providing high level prodn. of pharmaceutical and cosmetic products Example 2.1.2; Page 23-24; 42pp; German. Pissmid phww-2 contains the cDNA of the human PDGF-B gene, but with the 5'-translated region of the precursor being incomplete (see Q80473; which encodes R68617). The BamHI/NcoI fragment of phww-2 was used as the basis for mutagenesis to isolate the sequence coding for mature PDGF-B with a Met residue at the N-terminus. The mutagenised coding sequence was used in the construction of multicistronic expression units for recombinant expression of the PDGF-A/B dimer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Example 1; Fig 4; 39pp; English.

Example 1 describes the subcloning and analysis of C-sis and V-sis genes encoding FDGFB chain.

Clone UZ-OS561 contains the c-sis gene encoding human PDGF B chain.

Exons 2-6 of this clone were subcloned and sequenced. They encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New monoclonal antibody for prepn. of poly:peptide for wound healing - is specific for epitope in B-chain of platelet-derived
                                                                                                                                                                                                                                                                                                                                                                                                Recombinant multimeric protein prodn. in bacteria - transfected

Herpes simplex virus-1 (CVG-2) was isolated from a recurrent facial cested and passaged a maximum of four times in cells in culture.

Viral DNA was prepd. from virons that accumulated in the cytoplasm of infected VERO cells (Kieff et al., J. Virol., 8, 125-132 (1971)).

CThe BamHI SP junction fragments contg. the domain of the gene that specified ICP34.5 were cloned into a puCIB plasmid using HSV-1(F) sequences as probes in colony blot hybridisation. Further subclonings were done to facilitate sequencing of different regions of the gene. HSV may be rendered avirulent by removing the ICP34.5 gene from the viral genome. The modified HSV genome is useful for preparing a stable, non-transforming live viral vaccine which cannot be catchivated from a latent state.

The 4-1BB-L (ligand) protein is useful for exploring mechanisms of T-cell activation, as it is expressed on T lymphocytes. 4-1BB-L can be used as a tissue culture reagent for in vitro cultivation of primary T-cells during the derivation of clonal T-cell lines. It used in therapeutic procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  T-cell; lymphocyte; activation; tissue culture; clone; cell lines; proliferation; stimulation; 4-1BB-L; ligand; receptor; cytokine.
